NOTICE

The Village of Alsip
is conducting
SANITARY SEWER
EXTERNAL PROPERTY INSPECTIONS

Dear Resident:

The Village of Alsip (the Village) is performing the Metropolitan Waste Reclamation District (MWRD) required sanitary sewer property inspections. The purpose of this inspection is to locate, remove, and prevent sources of clear water entering the Village's sanitary sewer system. Clear water is water that is not contaminated with waste and does not require treatment for removal. Clear water includes rain runoff and ground water. Additional sources may also exist within the private properties. These sources can overload the sanitary sewer system during rainfall events, resulting in sewer surcharging, basement backups, and water pollution.

In its efforts to eliminate infiltration and inflow (I&I) sources through ongoing operation and maintenance programs, the Village has implemented this inspection. This work is being performed by its consulting engineers, Robinson Engineering, Ltd.

A field crew from Robinson Engineering, Ltd. will be in your area to conduct this inspection between the hours of 7:00AM to 5:00PM between **March 13 thru March 16, 2018**.

The survey crew has been provided with photo identification badges. Inspections will occur on the exterior of your property only. DO NOT allow anyone into your residence. If you have any questions regarding the proper identification, please call Robinson Engineering at **815-351-2023** or **815-215-2025**
